

BODH is a national benchmarking platform developed by Indian Institute of Technology Kanpur in collaboration with the National Health Authority to evaluate and validate AI solutions in healthcare before large-scale deployment.

The platform aims to ensure safe and reliable use of health AI by testing tools for accuracy, safety, and clinical robustness. It also promotes unbiased and scalable innovation by using anonymized real-world datasets to minimise bias and improve applicability across diverse populations.

APSC Relevance:

Relevant for Science & Technology, Digital Health, AI governance, and healthcare innovation initiatives in India.
