

DAKSH: RBI's Advanced Supervisory Monitoring System

DAKSH is a **SupTech (Supervisory Technology)** initiative of the Reserve Bank of India, designed as an end-to-end, web-based workflow application. It aims to make regulatory compliance and supervisory processes more robust, efficient and technology-driven.

The platform enables the RBI to monitor compliance requirements across **Supervised Entities (SEs)**, including commercial banks, **NBFCs and payment instrument issuers**. By digitising supervisory workflows and strengthening monitoring mechanisms, DAKSH supports more focused and effective financial-sector supervision.
