

The **Quadrangular Security Grid**, proposed after the **Land Border Districts' SP Conference-2026**, aims to create a localized security network involving border communities and police across **119 districts in 17 States/UTs**. It is expected to be finalised within **1.5 years**.

For **Assam**, which shares an international border with **Bangladesh**, such a community-linked security mechanism can strengthen border surveillance, intelligence sharing and early detection of infiltration, smuggling and other threats. It promotes a **people-centric approach to border management** alongside conventional security measures.

APSC Relevance: Assam Border; Internal Security.
