SOVA virus attack

Source: LiveMint

The **Indian Computer Emergency Response Team (CERT-In)** has issued a detailed safety advisory against a new mobile banking **‘Trojan’ virus, SOVA**, prowling in Indian cyberspace, which stealthily encrypts an android phone for ransom.

A **new banking malware** is targeting bank customers using **SOVA android Trojan** with the ability to harvest usernames and passwords. The malware hides itself within fake android applications displaying logos of legitimate applications like Chrome, Amazon, and NFT (non-fungible token) platforms and deceives users into installing them.
